1¼m more micros, says new report

Another 1¼m people will own home computers by the end of the year — most of them male and aged 15-44.

The figures are from a new survey which estimates that computers worth £216m will be sold along with £30m-worth of peripherals and software sales of £54m.

Commenting on the age of computer users, Mintel says: "This reflects the higher level of familiarity with new technology among the youngest age bands and the disposable income in the 30s to 40s age band.

Continued on page 5

Micro games by cable next year

Games are to be sent by cable to home computer users.

W.H. Smith says its service will start next year and subscribers would choose from 20 games.

Each month some would be deleted and more added.

It will be the first service offered by the company's newly-formed cable services division, planned to serve cable and

Get Knotted!

With the latest creation from New Generation

An action game that needs nerve and quick reactions! Hurtling through a void, your task is to travel as long as possible, scoring points along the way. Be careful though as you will have to avoid your own trail and those of up to four chasers. As trails are left you will have to thread your way through, but don't forget the more trails the less space for manoeuvring. You will be terminated when you finally get caught in 'the Knot'.

For 48K Spectrum and compatible with Kempston, AGF and MikroGen joysticks.

'It is the most astounding thing you'll see for a long time' - Popular Computing Weekly.

1½m micros

Continued from front page

"This is further endorsed by the highest ownership level being in the AB socio-economic groupings (middle class), decreasing progressively down the groupings."

But it points out: "Over half the adult population has no desire to buy a home computer."

"This rating is highest among women (64 per cent). The rating grows from 38 per cent of teenagers to 80 per cent of those over 65 and from 38 per cent of the AB grouping to 70 per cent of the E grouping."

"The consumer research, therefore, suggests a potential market for home computers of over 3½m units."

"The 'very high desire to buy' segment of this demand will account for about 1½m of these units. This group is likely to respond to its desire sooner rather than later."

Last year, Mintel says, 356,000 home computers — worth £664m at retail prices — were sold. Software worth £160m and peripherals valued at £100m were also purchased.

Half the sales of computers were in the Christmas shopping period. And for each month sales broke down into 72 per

cent hardware, peripherals 10 per cent and software 18 per cent.

The exception was January when, following Christmas computer buying, software sales doubled their proportion.

Mintel finds price cutting in high street shops "a strange aspect" and says: "This may be to attract market share or to de-stock in anticipation of new product replacing those currently available."

It expects this trend to continue into the second half of the 80s with the rate of fall easing. Prices could drop by up to 15 per cent a year.

And Mintel says high street multiples may well bring out their "own brand" computers.

It says, however, that multiple retailers were not looked on favourably because busy shops made service difficult, after-sales care was poor and training had been inadequate.

Specialist computer chains had been strengthening their position by providing trained staff, technicians and engineers on hand and other facilities for buyers.

Mintel sees specialist chains like Laskys as a growing and ever more significant element but mail order is estimated to fall to 12 per cent from last

year's 17 per cent.

Estimates of the share of trade this year (last year in brackets) give W.H. Smith 18 per cent (17), Tandy 12 (12), Laskys 5 (3), Spectrum 8 (5), Currys/Micro C 7 (4), Greens 4

(5), Dixons 2 (3), Boots 2 (2).

Mintel's report, Home Computers, also goes into detail about other aspects of the market. It costs £95.

Mintel, 7 Arundel Street, London WC2R 3DR

Cable games

Continued from front page

satellite TV and headed by 37-year-old Francis Baron.

W.H. Smith has signed a deal with The Games Network, of Los Angeles, to distribute its services in the UK and Eire.

It says that The Games Network has a large and growing library of games — about 25 per cent educational — and suitable for all ages.

Although at the start the programs would come from America, there were plans to develop new games in Britain for distribution here and around the world.

W.H. Smith's chairman Simon Hornby said: "Although we decided, after a great deal of

research, not to join a consortium for investment in the actual cable operations, we have been keeping a close watch for opportunities in this field."

"The Games Network will be our first step into providing cable services, and we are setting up this new Cable Services Division as we plan to introduce other services for cable operators."

W.H. Smith says it believes The Games Network will increase the overall market for computer games.

The Games Network will be seen in operation for the first time in Britain at the Cable and Satellite Television '83 Show at the National Exhibition Centre, Birmingham, on September 11-14.

You could be on our pages

We welcome programs articles and tips from our readers.

PROGRAMS should, if possible, be computer printed to a width of 48 characters (use a new ribbon) and/or sent on cassette. Check carefully that they are bug-free. Include details of what your program does, how it works, variables you have used and hints on conversion.

ARTICLES on using home computers should be no longer than 2,000 words. Don't worry about your writing ability — just try to keep to the style in HCW. Articles most likely to be published will help our readers make better use of their micros by giving useful ideas, possibly with programming examples. We will convert any sketched illustrations into finished artwork.

TIPS are short articles, and brief programming routines which we can put together with others. Your hints can aid other computer users.

Competitive rates are paid.

Keep a copy of your submissions and include an SAE if you want them returned. Label everything clearly and give a daytime and home phone number if you can.

Paul Liptrot, Home Computing Weekly, 145 Charing Cross Road, London WC2H 0EE

Learning at home

It just goes to show that you can't keep a good micro down.

After Sinclair's early setback in the educational market, when the Spectrum missed out on being chosen by the government for use in secondary schools, it has bounced back. It is now the first company to offer the Microelectronics Educational Programme range of educational software direct to consumers.

Spectrum gets down to business

Oxford Computer Publishing has come up with two ways of making your Spectrum do some work for its living.

Finance Manager is intended for small business as well as home accounting, and has facilities to deal with automatic double entry, standing orders, account balances, new transactions, and bank statement reconciliation.

Address Manager is a filing, indexing and retrieval system for over 400 addresses (in 48K).

Both programs are written in machine code and both cost £8.95. Finance Manager is for the 48K Spectrum only.

OCP, Brimrod, 4a High Street, Chalfont St Peter, Bucks SL9 9OB

Filing made simple

Simple Software, formerly specialists in programs for the Pet, are now branching out into material for the Commodore 64.

Simple's latest offering is Simply File, a disk based database management system for the 64 and Pet.

As the name suggests, the program is basically an electronic filing system which enables you to index, group and search for records by a number of criteria.

It will also carry out calculations on groups of records, output information in the form of files for use with other programs, and if you've got a printer it will print out labels and summaries of selected groups of records.

Should you have the Simply Write wordprocessing package, it will work in conjunction with that too. Capacity is about 400 records of 254 characters each. Price: £69.

Simple Software, 15 Havelock Road, Brighton, Sussex BN1 6GL

The Spectrum did get picked for use in primary schools, along with the BBC B and RML 480Z. The MEP range that Sinclair is now selling was specially commissioned by the Department of Education for use with these three micros, and includes programs for maths, reading, language development and problem solving.

Sinclair believes that there still aren't enough micros in schools for children to make the most of the software range, and by selling it commercially, hopes to encourage learning at home too.

The four packs in the range each contain two software cassettes and full instructions, and cost £24.95 each.

Sinclair Research, Educational Division, Stanhope Road, Camberley, Surrey GU15 3PS

Cartoons on computers

Cartoon strips B.C. and The Wizard of Id are being turned into a series of games and educational programs.

At first they will go on sale in America and Canada, but the Sydney Development Corporation says they will be coming to the U.K. soon.

Sydney has signed a licensing deal to use the characters created by award-winning U.S. cartoonist Johnny Hart. His strips appear in several U.K. newspapers, including London's Standard.

Over the next 18 months Sydney, based in Vancouver, plan to bring out eight programs — for computers like Atari and Commodore 64 — called Quest for Tires, Wiztype, Wizword, Wizlab, Wizmath, Wizspell, Dot to Dot Zot and Bung Juggler.

Talking about maths

Children aged four to six can learn basic maths with a VIC-20 program which "speaks" to them, says Currah Computer Components.

Chattermaths, priced at £4.99, generates its voice from word sounds to ask and answer the questions. Correct answers make a figure climb a ladder.

Currah says the program is the first of a range of educational "speechware" for different age groups.

Currah Computer Components, Graythorp Industrial Estate, Hartlepool, Cleveland

Price cuts that fuel micro wars

The millions upon millions of promotional pounds now being lavished on small computers (£4m from newcomer Mattel, £10m from veteran Commodore) underline one widespread and unforeseen side effect of the micro-electronics revolution. That is, to create so great a product proliferation as to destroy price levels, make competition a nightmare and utterly bewilder the consumer.

Since using the personal computer itself can be bewildering, the result is one of the strangest boom markets in history.

All over the world, people are buying sophisticated machines in very large quantities and often at stiff prices: even after a £116 cut, the Commodore 64 still costs £229. Yet many purchasers are not using their new babies to anything like their full potential. It's no longer true, in the States at least, that the overwhelming home use is for playing infantile games. But early infancy is the present age of the computerised home.

Paradoxically, toy manufacturer Mattel is now trying to make the home computer more adult by offering a £100 console that will save lucky purchasers the bother of switching on the light. But is the buyer wise to fork out £79.95 for Mattel's Aquarius offering, without that optional extra? Is the Sinclair Spectrum worth its few pounds more? And what about all the alternatives, extant and on the way?

Because of the attractive potential of the market and the ease of design, manufacture and entry created by the chip, it's almost anybody's game.

So sweeping a spate of introductions and innovations simply give the consumer too much choice: rational buying decisions have become as difficult in this market as in hi-fi, where again model proliferation is to blame. The consequences are already evident and inevitable.

The price wars that have forced down Sinclair's bottom-of-the-range price to \$29 in the States will become endemic in many markets. The office of the future, for instance, is likely to be hit by price wars even before that future has become reality.

The pace will plainly become too hot for some. Already, Texas Instruments has run into huge losses, while Timex (which makes Sinclair's computers and markets them in the States) has met some heavy weather. If it were to founder, or if Sir Clive's expected new offering fails to wow this oversupplied market the outlook for Britain's pioneer would become thick with dark cloud — especially now that the Americans are raising the advertising ante so steeply, while cutting prices as sharply.

Truth has become as strange as fiction. In 1967, when Ivor Williams began his Management Today series on a mythical company called Minipute, he thought up an obviously mythical product: the expendable computer.

At \$29, his dream has practically come true. The only trouble is that it probably means many expendable companies.

Robert Heller

Editor, Management Today

Glanmire's Controller lets your ZX micro keep an eye on the time

Clockwatching computers

Glanmire Electronics has developed a clock which allows the ZX81 and Spectrum to tell the time in months, days, hours, minutes and seconds,

Software for a rare beast

If you own that rare beast the Lynx, a new company has come on to the scene to sell software for it. Bus-Tech is Steve Pearson, Julia Hine and David Sims-Mindry, who hope to have their first programs ready to sell within a few weeks.

Though initially the company will be offering six arcade-type games — Lynx Muncher, Battle Brick, Death Ball, Zombie Panic, SS Orion and 3D Maze — the aim is to have some educational software and a graphics utility soon.

Meanwhile, with each order, Bus-Tech is giving away a simplified version of the graphics utility free. The games will be priced in the £4.50-£6.50 range.

Bus-Tech, 19 Landport Terrace, Portsmouth, Hants

Recorder discount

If you buy a Spectrum from Smiths, you can get a £10 discount off the price of Smiths' own-brand computer-compatible cassette recorder, the CCR800, which normally costs £34.95.

A Smiths spokeswoman said that the offer would be open 'indefinitely'.

W H Smith, Strand House, 10 New Fetter Lane, London EC4 1AD

and to switch other devices on and off under program control.

The Time Controller normally uses the computer's own power supply, but contains a rechargeable battery which, so the makers say, would keep going for over a year should the main power supply fail.

It has eight programmable inputs and outputs, and comes with full instructions to tell those with some knowledge of electronics how to go about connecting up a light switch, burglar alarm, or whatever they might want to control.

Alternatively, if you really can't face the thought of dabbling in electronics, Glanmire is working on an interface which will allow external devices to simply plug into a socket.

The Time Controller costs £34.50 for the ZX81 and £38.50 for the Spectrum.

Glanmire, Westley House, Trinity Avenue, Bush Hill Park, Enfield EN1 1PH

Fast lane to the show

If you're planning on going to the Personal Computer World Show at the Barbican next month, you can dodge the queues by sending off for "fast lane" tickets.

As well as getting you into the show without having to wait, the tickets are cheaper than those bought on the day — £2 instead of £3.

The show is on from 29 September to 2 October, from 10 am until 7 pm — apart from the Sunday, when the show closes at 5 pm.

Montbuild, 11 Manchester Square, London W1M 5AB

Acme, son of Bug-Byte

Bug-Byte has spawned another new software company.

First some employees left to set up Imagine, and now Alan Maton, 32, and his 26-year-old wife Soo have done the same.

Acme Software's home is a small office in The Albany, a building in central Liverpool where Bug-Byte began.

Bug-Byte co-director Tony Milner said: "It tends to happen at this time of year, in time for the Christmas sales.

"Allan is a good friend of mine and we have parted on amicable terms. I wish him the best of luck and I think he's going to need it. It's quite difficult to make a name for yourself now.

"You are dealing with a few large firms who know what they are doing and have been doing it for several years.

"I hope Alan makes it. He's got the knowledge and the get-up-and-go."

Mr Maton, whose first four games go on sale in September, said: "You can't beat being your own boss. It's quite a challenge and I'm enjoying every minute of it.

"If I fail I've only got myself to blame, but if I succeed I will have one of the biggest heads around."

At Bug-Byte Mr Maton was responsible for despatch and checking on stocks at dealers and distributors and Mrs Maton was Mr Milner's secretary.

They say all their games will cost £5. Two of the first four are for the VIC-20: Alien, a space game, and Bridgeman, in which the player guides a man across bridges.

Connect Four is for the Lynx and Practically Impossible, a five-level abstract game, runs on the Spectrum.

The next release will be an adventure for the Oric and Colour Genie.

Acme will soon have its first employee, 16-year-old programmer Chris Cannon, whose job will be to evaluate programs.

At first the programs will be sold by mail only and then, Mr Maton says, Acme will establish a dealer network and take on more staff.

Acme Software, 49-51 The Albany, Old Hall Street, Liverpool

EDITORIAL ASSISTANT

Computing today

Due to promotion, Computing Today is seeking an Editorial Assistant. The person we are looking for is an accurate worker with a sense of humour who will be able to maintain the high standards of the magazine while keeping to deadlines. Knowledge of program assessment, development and debugging is required, both in BASIC and machine code/assembly language (preferably for the Z80 and/or 6502). Applicants should be able to express themselves in English but no journalistic experience is necessary: training in technical journalism will be provided.

Familiarity with other languages, particularly Pascal and FORTH, would be an advantage, as would a general knowledge of electronics.

Salary is negotiable depending on age and experience. All applications will be treated in strictest confidence. To apply, send a CV to:

CT Vacancy,
Ron Harris, Managing Editor,
Argus Specialist Publications Ltd,
145 Charing Cross Road,
London WC2H 0EE.

Interceptor Micros, Lindon House, The Green, Tadley, Hants

This is not a game to start playing if you have to go out in the next hour. It is a version of Pacman where you run round a maze eating dots pursued by four ghosts

If you eat a power pill then you can eat the ghosts rather than them eating you but after a short time they rematerialise at the centre of the maze and are again in pursuit

The instructions are clear and concise and give you a guide to tactics you might use to attain a high score. A joystick makes life much easier especially with the

speed some of the ghosts move at

The graphics are very good and even if you are not skilful enough to get past the first screen, the game is fun and compulsive.

A minor criticism — the running score is cramped at the top of the screen and unless you achieve the highest score you get little chance to read it when you have run out of your three lives

This is particularly relevant when you have three or four children playing, and they want to keep track of their personal attainments.

Arcade
action in
your living
room

Our reviewers look at five more arcade clones and find that, on the whole, there's life in the old themes yet

Galactic
Invasion
Jupiter Ace
plus 16K
£6.50

JRS, 15 Wavside Avenue, Worthing, Sussex BN13 3JL

The V-shaped invaders come, as is usual, from above and the gun fires at them from below. Invaders are LDGs; the gun at least is realistic.

Keys Z and C move the ship left or right, U says, but hey? Where's the ship?

We have to imagine it, against the background of muted noise as the shots zap home and the in-

vaders evaporate like beeping bats

Your score is kept and previous highs recorded till surpassed by the summated efforts of your three lives. There are also three levels of difficulty, though the two hardest are much the same

This is really quite a good implementation of the old favourite, but I would be more enthusiastic if I had not seen it so often done rather better

by machines with colour and using machine code

The third expert level would really have to be written in assembler if it is to achieve a noticeable advance on the "fast" level where the Forth is practically flat out

Frogger
VIC-20
£5.99

Rabbit, 380 Station Road, Harrow HA1 2DE

For the benefit of any Martians who have just bought a VIC-20 Frogger involves piloting a small frog across a large road followed by a large river to its resting place on the opposite bank

The journey faced by the amphibians in this program is very hazardous involving slow cars, fast cars, buses, turtles, logs and alligators

Noticable by their absence are several features of the original game such as diving turtles, little bonus frogs which can be carried to safety and a time limit, but the game is complex and challenging as it stands

Graphics are good, especially the alligators — not for faint hearted Frogs. Sound is almost non-existent, a fact I have noted in several Rabbit productions, but I suppose you can't have everything

No bugs were found except possibly the lack of time limit. The bottom right hand corner of the screen clearly shows the words Time Frogger, but that's as far as it goes.

It makes a change to do something humane for once instead of wiping out yet another galactic civilisation

Space
Invaders
TRS-80 Models
I & III,
Genie I & II
£14.95

Molimers, 1 Buckhurst Road, Town Hall Square, Bexhill-on-Sea, E Sussex

This version differs from many Space Invaders in that it allows the user to set a large number of variables at the commencement of any game. Such attributes as the accuracy and number of alien bombs, games speed, bomb type and scoring are just some of the customizing that may be set

Sound is also available, though I couldn't get the benefit of it on my TRS-80 model III

Alien space ships gradually move down the screen, attacking

your laser base which you move along the bottom of the screen by the use of the up and down arrow key. The aliens drop bombs from their ships and should you be hit by one of these you lose one of your laser bases. Graphic blocks are conveniently sited for you to hide behind but gradually get destroyed as they are hit by your fire or bombs from the aliens

The game is written in machine language and is, therefore capable of very fast action at the higher level of difficulty. The game would probably not be of interest to owners of other invader programs but the level of customizing that is provided makes it a very worthwhile version

Maze Chase
Spectrum
£4.95

Hewson, 60A St. Mary's Street, Wallingford, Oxon OX10 0EL

Unlike some programs, this one does not pretend to be what it isn't; it is basically Pacman, plus or minus a few features. There are four ghosts, a man (instead of a mouth), and dots, and

bonus strawberries and lemons to eat.

The ghosts are all white and behave in exactly the same way as each other — they do not have names and personalities like their arcade brothers. The graphics are just user defined characters and are not very clear

There are four mazes on the 16K version and 12 on the 48K version. You can't choose which one you want. They appear randomly, and there is not a great

difference between them

The strawberries and lemons are randomly placed in the mazes. When you eat a strawberry you get 100 points and the ghosts turn purple, allowing you to eat them. They do not stay in this state of trepidation for long and give no warning when about to regain their courage.

I quite often found myself being eaten by a white ghost when I was expecting to eat a purple one

The man is controlled using the unambiguous cursor control keys. The program remembers the last key pressed, so you can press a different key in advance of the turning

Warning: cigarettes can damage your home, your guests ... and your robot

How it works

110-230 main routine:
 250 initialisation
 260-420 new position for robot
 430-440 check for obstacle, cigarette
 450 reduce cigarette total by one
 460-490 increase score by 10, reduce by rooms destroyed multiplied by 25, prevent negative score
 500-540 set flag for score routine, call cigarette plotting and robot position routines, restore last robot co-ordinates
 550 crash
 560-690 robot sleeps while three extra cigarette ends are plotted, end robot move routine, plot new robot position, print new score if flag set, unset flag
 700-760 produce random position for cigarette end, preventing it landing on occupied square; give square a "cigarette value", plot cigarette end, increase cigarette total by one
 770-800 store robot co-ordinates, take over co-ordinate variables
 810 calls cigarette plot/unplot
 820-830 restore robot variables
 840-920 if 10 cigarettes in room one place chair in each doorway and give doorways "chair values", remember (890) which room, call subroutine for dimensions, call burning subroutine, set cigarette total
 930-1370 subroutines for the other five rooms
 1390-1490 burning routine scans room, left to right, painting and erasing flame, leaving ash behind. 1440: burning noise
 1500 tests to see if robot destroyed
 1510-1760 game end messages, reset, return to start if any key pressed
 1770 returns from burning room subroutine if robot still alive
 1780-1950 subroutine to decide which room has had change in cigarette total, read dimensions of room to be burned
 1960 increases factor which reduces score
 1980-2070 define characters
 2080-2160 set up colours
 2160-2220 title page, instructions
 2230-2240 player inputs number of cigarettes, figure stored
 2250-2750 draw walls, give every square an "obstacle value", print doors, give "clear space" values to squares either side of doorways
 2760-2930 plot 30 chairs, 30 guests in unoccupied squares
 2870 casures men and women are plotted alternately
 2940-2970 first position of robot
 2980-3030 print score indicator.

Careless smokers cause fires. Can your heroic robot collect the cigarette ends before your party turns to ashes? Find out with Tony Garner's program for the standard TI-99/4A

It's a great party, but your guests can't seem to find the ashtrays.

Luckily, you have a robot which should collect the cigarette ends — guided by you and your TI-99/4A — before they become a fire hazard.

If a room contains 10 cigarette ends the heat causes it to burst in to flames and, if the robot is trapped in the room, he perishes and the game comes to an end.

Otherwise he carries on with his heroic mission in the other rooms and he has cleared up the number of cigarette ends you selected when the game began.

Each time he bumps into a guest, a wall of furniture his circuits are temporarily disrupted and he becomes inactive while three extra cigarettes are dropped.

If four rooms are destroyed the game becomes a question of survival — the player's original figure is ignored while the demoralised robot tries weakly to keep two rooms, and finally one room, clear.

There is no limit to the number of cigarettes that can be requested but, for a competitive game it would be best to increase them gradually from about 30.

Regardless of average, the best score is the highest. But the average can be increased by intentional crashes. These increase your possible score without raising the number by which it is divided.

The range of the robot can be altered by changing the total of GOSUB 260 lines between 110 and 220.

The game can be made more dangerous by adding more GOSUB 710 lines in the same place or between lines 560 and 590.

Variables

BO number of cigarettes to be dropped
M number of rooms burned down
V,W store robot's vertical (R), horizontal (C) co-ordinates
D ASCII value of key pressed
E cigarette total
TOT basic score
SC score after adjustment
FL flag to show score has changed
CS current score as string
P,Q cigarette's vertical, horizontal co-ordinates
RR,CC stores for R,C
S(X) total of cigarettes in room (X)
SP room
L(1),L(2)/K(1),K(2) horizontal/vertical dimensions of room to be burned
AV score divided by BO
HSC high score
BAV average for high score
BOA store for BO
ST indicates nature of keypress: = same, different, none
A character to be defined
NS hexadecimal string defining character
GIR graphics character for male or female guest

Hints on conversion

CALL KEY returns ASCII value in the variable D
CALL SOUND generates note or noise in following order: duration (negative values enable program to proceed during sound), note value (110 is low, 262 is middle C), volume (0 is loud, 30 is quietest). A negative value from 1 to 8 produces noise three notes and one noise can be bracketed for same duration
CALL HCHAR plots character by row (1-24), column (1-32), ASCII value and, if needed, number of repeats after and including first position, horizontally
CALL VCHAR as above, but vertical
CALL COLOR sets character set (multiples of eight from 32 to 159), foreground colour (1-16) and background colour (1-16): 1 transparent, 2 black, 5 dark blue, 7 dark red, 10 light red, 12 light yellow, 13 dark green, 14 magenta

The data in line 1950 will need to be adjusted to the new dimensions of the rooms, which will be set, depending on screen size, in lines 2260-2620. Doors will also have to be altered.

Graphics designed in 2040-2070 are: 42 robot, 120 flame, 128 ash, 136 cigarette end, 144 chair, 104 female guest, 96 male guest, 152 top wall, 154 bottom wall, 155 interval wall horizontal, 156 central corridor, 157 vertical wall.

The program sits well inside genuine 16K, but the array DIMENSIONED in 240 consumes a lot of memory.

The TI does not allow multiple statement lines, but these may well be required for other machines with less available memory.

The GOSUB structure should make life easy for the BBC micro users to make a straightforward adaptation.

HOME COMPUTING WEEKLY—ON SALE EVERY TUESDAY. MAKE SURE OF YOUR SEPTEMBER COPIES NOW!

Britain's liveliest weekly for home computer users has thousands of pounds of prizes to be won in its **September** issues. Each competition has prizes worth **at least £1,000.**

And **September** is top value month for Home Computing Weekly readers. Each issue will have **extra pages** packed with information and quality games listings to type in. All this costs the readers the same as usual: **Just 38p!**

Bamby SOFTWARE

GOLDEN APPLES OF THE SUN.

The Golden Apples have been stolen and hidden in seven different locations. Can you recover them all? There's a surprise once you have. Hi-res graphics and text. **£8 45**

WYTHMANNET.

Test your skill on the stockmarket. Prices are influenced by your own actions, and Government actions — just like the real thing! See if you can make a million. Text **£5 95**

ALIEN ODESSY:

A four-part adventure game. This tape contains the first two parts, in which you must escape from the Castle, then journey across the Great Grass Plains to the Mountains of the Moon. Hi-res graphics and text. **£9.95**

MINI-GAMES:

Four short games on tape consisting of Blackjack, Maths Test (5 levels of difficulty), Guess the Number, and Layers, a game in which you try to survive a year in the farming business. Text **£5 95**

INTER-PLANETARY TRADER:

You are the Captain of a Starship. You have to buy a cargo, and attempt the inter-stellar jump to your destination. But beware, meteors and space pirates are out to get you. Text **£5 95**

DRAGON TI-99/4A for SPECTRUM 48

DATABASE. (DRAGON)

A personal filing system we can modify to suit your own requirements. Please ask for quote. **Approx. £16.95**

SURPRISE (DRAGON)

Regain the magic ring, but to do so you must first find the key to the Tower, avoid robbers, and more. Then bewitch the Dragon and you're home and dry — almost. Hi-res graphics and text **£ 45**

SCANNER 13: (DRAGON)

Set in the City of the future, this game combines the best elements of both arcade and adventure games. Destroy the evil Drones before they destroy you and your City. Three levels of difficulty. Hi-res graphics and text. **£8 45**

BOPSWIZZLE: (DRAGON)

A splendid fun game! Beat the ghastly Gloops and the yucky Yerkies, amongst other nefarious nasties. Collect pearls at the same time! Low and hi-res graphics and text. **£5.95**

AMAZING: (DRAGON)

Series of five mazes specially for the under 5's ranging from quite simple to fairly complex. An excellent way to amuse pre-school children, and they learn from it too. Hi-res graphics. **£5.95**

ALONE AT SEA FOR THE TI99/4A (TI-99/4A)

Try and escape the sinking ship, but don't forget your supplies which are hidden somewhere. Text **£6 50**

K-64 (TI-99/4A)

A mind-bender. Cover the squares once only using the knight and its valid moves. Easy?! Full graphics. **£6 50**

MYSTERY MANOR FOR THE SPECTRUM (SPECTRUM)

Find the murderer before he (or she) finds you and your career as Detective Solvit! Graphics and text. **£6 50**

MASTER CODE FOR THE SPECTRUM (SPECTRUM)

Based on the famous game. Try your skill against the computer. You CAN beat it... Graphics and text. **£6 50**

All available immediately from Bamby Software, Leverburgh, Isle of Harris PA83 3TX. Includes our no quibble guarantee. Access orders welcome by mail or telephone 085982 313 Dealer Enquiries Welcome and 48 hour delivery

Economical strings

Ray Eider quite correctly points out in his article, The REMarkable REM, that using a string variable to store data on the ZX81 effectively uses more than twice as much memory as the length of the string, when the string is defined in a program line. His suggested method of using a REM statement combined with PEEK and POKE is a valid and useful method of handling data.

However, there are two possible ways of using strings to store data which do not involve wasteful "double-up" of the data. The most familiar of these is to define the string by means of a command rather than in a program line. Thus you can write a command

```
10 DATA "ABC"
```

and then a program to PRINT the data may be

```
100 PRINT DATA
```

This routine must be activated by the command GOTO 10, as RUN would CLEAR AS. Another method, perhaps not so familiar, avoids the use of string variables altogether, although it does utilise a string in a program line; it has the additional benefit that the program can be RUN

```
100 PRINT DATA
```

Obviously this is an extremely simple example for illustration purposes.

One could also write, for example

```
100 PRINT DATA "ABC"
```

or

```
100 PRINT DATA "ABC"
```

Here is a printout from the last example above

```
ABC
```

In this case, the first string in line 20 contains the most significant byte, and the second string contains the least significant byte, of a two-byte data set.

Of course, use of the technique need not be limited to PRINT statements; the forms GOTO, LET, X=..., IF VAL..., (J..J+n) THEN... can all be used, as with any other value in a program line. Nick Godwin, Eyemouth, Berwickshire

Send your letter to Letters, Home Computing Weekly, 145 Charing Cross Road, London WC2H 0EE. Don't forget to name your computer — the best letter could win £5-worth of software. Queries cannot be answered on this page

Microfair goes north

I have good news for M Logan who, in HCW 17, complained about the lack of microfairs in Scotland.

The Strathclyde Home Computer Fair takes place on August 26-27, at the McLellan Galleries, Sauchiehall Street, Glasgow.

The fair will open to the public and exhibitors are from not only Scotland but from the whole of the British Isles.

We hope that this will be the first of many yet to come, as we feel sadly left out in the microfair circuit. M. P. Sloan, Jarak Sales, Hamilton, Scotland

It's time we leaned on micro makers

I am starting a Rat File on the Oric.

I am one of those poor unfortunates who bought an Oric Maled by their advertising. Professional keyboard! 16 Colours! 28 days delivery! I am also one of the unfortunates who was so badly misled by the Oric switchboard about delivery dates.

If any of your readers have brought an Oric and feel that they were deliberately misled, either in the Oric specifications or delivery dates, I would be pleased to hear from them.

Similarly I would like to hear from anybody who has had experienced problems with their after sales service. I am still waiting for a reply to a letter which I wrote to Peter Harding (Sales Director) in April at the request of their PR consultant.

We, the computer-buying public, have been badly served by the manufacturers and I feel it is time that we put some pressure on them.

Sinclair, Acorn and Commodore have also misled us with unrealistic delivery dates, ambiguous specifications and/or very late "coming soon" add-ons. But I bought

an Oric, so it's Oric that I'm making a fuss about.

One other point to the software houses, following recent reports, letters and opinions. Don't expect too many women customers when successful adventurers are rewarded by marrying princesses if you want to alienate half your potential market and, ultimately, half your potential authors, fine, as long as that is what you intend to do.

Keith Ollett, Hookstead, Goldsmith Avenue, Crowborough, East Sussex TN6 1RG

My Oric's not so bad

Having read many articles in established computer magazines (Home Computing Weekly being one), I have found that people who write in about the Oric-I always point out the bad point and ignore the good.

I have had my Oric now for nearly six months and I am very pleased with it. (It seems I am the only person who is!)

Admittedly it was very late in arriving, but when it did come I found that what you can do is only limited by your imagination and your ability to write programs; and as software is becoming more readily available, things are definitely looking up for Oric owners.

Alan Greenshields, East Lothian, Scotland

Problems with Vanguard

There seems to be a few problems with the listing of my VIC-20 program Vanguard, which was published in HCW 21. Most people who typed the program in have probably ironed these out for themselves by now, but for the benefit of those who haven't, the problems and solutions are as follows.

Line 6530 should read POKE 198 0: WAIT 198 1

The line number 6515 between 6900 and 8000 should actually be 7000, and you should also remove PRINOO from the beginning.

Line 6900 should read 6900 PRINTTAB(O) "GREEN G RED 2 SPACES GREEN F" RETURN

The words inside the square brackets are control colours and spaces.

One last thing: the initialisation program is the second one.

SOFTWARE REVIEWS

Games with the original touch

You won't find Froggers or Pacmen in disguise in this collection of games, tested for you by our reviewers

Entire Commodore 64 + Joystick £9.95

Supersoft, Winchester House, Canning Road, Wealdstone, Middlesex HA5 7SJ

This game must be one of the most unusual yet devised for the 64. The object is to protect a

large green cactus in the centre of the screen from an assortment of desert creatures.

Wasps and hornets circle the cactus and gradually get lower until they take a bite from the base, all the time discharging a mist of "droppings" which eat into the supporting desert floors.

Purple buzzards drop bouncing eggs, lethal to your missile base and which eat away the ground in great chunks.

Green bleeping moles fill in

patches of ground and can trap your base on each side of the cactus, but these give bonuses when shot.

Your cactus can survive 10 bites at its base, and points can be earned if the roots are left intact, but if the ground should be eaten away, the cactus will fall in an explosion of green, and you will lose a life.

the zone of droids then you proceed to the next higher zone, of greater complexity. There are 20 zones in all.

On your travels through the zones you are likely to meet nasty humanoids who point out your position to the enemy, deflector beams that rebound your shots, and caravans of camels (Llamas?). When you get hit you explode in a multicolour shower of sparks with equally impressive sound effects.

The instruction card is very good, setting the scene for the game and giving a detailed explanation of the scoring etc.

Android 1 Spectrum £5.95

Vortex Software, 280 Brooklands Road, Manchester M23 9HD

If you buy Android 1 — The Reactor Run — you can give up any hope of spending stress-free evenings with your Spectrum.

Your mission is to save the world by infiltrating a reactor complex which is guarded by four different types of mutants, and destroy the reactor — within a time limit.

To infiltrate the complex your robot, Android 1, must blast his way through the walls that surround each stage. But remember to watch out for the aliens. The farther you get through the less predictable the guards become, and the more difficult they are to avoid.

The graphics are colourful and

the action is accompanied with well-thought-out sound effects. Android 1 runs, rather than glides, across the screen in an endearing manner.

There are five skill levels — the most difficult seems impossible, while the easiest is fast enough to be a challenge. There is a wide choice of keys but controlling the robot is difficult. Provision is made for the Kempston joystick.

The comprehensive on-screen instructions are attractively presented. The game loaded in five stages, which makes for a long wait, but there were no loading problems.

Acnean Mutoids BBC 32K £6.50

Soft Joe's, Cloughton Road, Bickenhead, Merseyside L41 6ES

This game doesn't fit any preconceived categories.

It is really a cross between an adventure, a minefield and a maze game. You wander around a captured spaceship looking for weapons and keys whilst avoiding invisible aliens.

The stated aim is to survive and to set the self-destruct mechanism so that the aliens are prevented from reaching Earth. But simple survival was my main problem.

The game gets rather boring after a while, despite the six play levels. If you are unfortunate enough to find an alien before

any weapons then the game is extremely short and rather pointless. The real problem is that the game relies far too much on random factors and not enough on skill (or luck, if you like).

The graphics are good, although to make the playing area larger the characters are rather small. I especially like the advancing alien showing its teeth.

The choice of control keys is, however, most strange and could be much improved. Since the game's written mostly in BASIC, response time is rather slower than I would like. The cassette is well priced for its contents and should appeal to younger players.

Mangrove Commodore 64 £9.20

Supersoft, Canning Road, Harrow, Middx HA3 7SJ

This game can be played with a joystick or keyboard. It requires you to maintain a cluster of healthy cells against attacking cancerous ones.

As you move around the screen you leave behind a trail of healthy cells, but they only survive if they are next to four healthy ones.

The wandering cancerous cells can quickly break up your large groups into small clusters which then wither away. In fact, so quickly, that I found the game frustrating and equally quickly lost interest.

The screen display is clear and makes use of customised

characters for the cells. At the top of the screen is displayed, the number of healthy cells remaining, the current score and the highest score.

You can obtain some respite from the onslaught of the hostile cells by firing off a dose of radiation, but you have limited supplies.

Although the instruction card that comes with the game is quite clear I think some younger children will find it hard to ap-

preciate the mechanics.

The concept behind the game is good but I feel it could have been implemented more imaginatively with better graphics and sound.

FOR FIRST TIME USERS...

A new series of books which introduce newcomers to the most widely used micros in the marketplace.

The books assume absolutely no knowledge about computers and the reader is shown even the most fundamental operations such as "switching on" and "loading a program". The books lead the reader through simple programming and then onto graphics, with several programs which show how to achieve pictures and even animation. The books contain a number of specially written programs which show the full potential of these machines

"The text is liberally supported by all manner of useful diagrams and illustrations (including many black and white photographs of the screen). The overall presentation is excellent. The printing, setting out and listings are clear and positively invite the reader to have a go."

Software off the beaten track

Read our reviewers' ratings of these five programs, which reveal some unexpected uses for your micro

Cocktails 48K Sharp MZ-80K £5.50

Epsom, 25 Chartwell Place, off Downs Road, Epsom, Surrey

Here's a little gem for the tippers amongst us! The program lists 102 different cocktails — imagine, you have to get through 102 recipes before you start to repeat yourself! Enter the contents of your

drinks cabinet and, after going into a trance, the computer will list the cocktails you can make from your stock of drinks

A second option gives an alphabetical list of all 102 recipes. Browse through the list, using 999 to call the next page, and then enter the number of the cocktail you want to make. The computer will list the recipe of your choice

The program is supplied on cassette, complete with a clear and well written set of User Notes. All

special reports are available: slow moving stock report, minimum stock report, and nil stock report

You are taken through each program section by a menu, and HELP key is provided

Considering the application, the program could be accused of overkill but for a good, reasonably fast stock control program, this fits the bill nicely

As the program is written, a maximum of 50 items may be held on file. With a 48K machine this could be stretched to 255 items. Mind you, the program will run slower

One annoying minor bug — the * INPUT for wrong date is not accepted as it stands. A simple mod would correct this. I.H.

instructions	70%
ease of use	65%
display	80%
value for money	75%

Stock Control 48K Sharp MZ-80K £5.50

Epsom, 25 Chartwell Place, off Downs Road, Epsom, Surrey

This utility program for the MZ 80K is designed for the stock control of the contents of a domestic deep freezer. Supplied on cassette, it comes with four sheets of user notes

For each stock item, the program records item number, description, unit of measure, stock level, minimum acceptable stock level, stock value, date of last receipt and date of last issue. There is also a field for notes

Various reports are available, any of which may be sent to a printer if required. The program will list by stock type or generate a total stock value. An extra three

Instructions unhelpfully load separately, are rambling and contradictory, and there was difficulty in reaching some program-options from the menu

Every week you must input number-coded details of all matches on the coupon and all results — very carefully, because there's no error-trap routine

'Zeep' perms are not full perms — eight score-draws can come up without winning. Costwise, a stake of 25p seems impossible and the

Pools 48K Spectrum £20 plus

Football Enterprises, Anvon, 9 New Road, Haverfordwest, Pembs SA61 1TL

Pools apparently calculates probable draws on past-performance basis, selecting 22 matches for entry as 'Zeep' perms of 900 or 3600

suggested 45p or £1.80 presumably applies to Zetters (low dividends) Littlewoods require £6 or £24 stakes

Everyone gets the same selection, so shared dividends could be pennies, but you are committed to send the author £55 if three first dividends come up

With no facility for the Australian pools, testing must await the start of the UK soccer season but, using an old coupon, it achieved two score-draws and two

this means there should be no problems in getting up and running

Written entirely in BASIC, program ARRAYS are LOADED from DATA statements so initialisation and searches can be on the slow side. Don't let this worry you as the program RUNs well and is a pleasure to use — especially after the fourth recipe!

Good value for money and

entertaining as well. Not bad going for a utility program

I.H.

instructions	80%
ease of use	80%

value for money	85%

Learn to play guitar Spectrum £6.00

Lasersound, Stratford Workshops, Burford Road, London E15

If you want to learn to play classical guitar this is not the program for you because no instructions given in playing individual notes. But it's OK if you want to accompany songs by learning chords.

A tune to accompany can be played and letters flash up at appropriate points in the lyric to denote the chords that should be played.

Finger positions for over 50 different chords are illustrated, if required but no information on how to play chords is given. Never-

theless, this is an excellent reference

Six different notes can be played for tuning, but no instruction in tuning is given. However, the correct "beep" values can be worked out from the Spectrum manual so this is not a valuable option

A conversion table is displayed but I was unable to decipher it and its importance is not explained

I could not load the last option which should be a list of tunes

With the exception of those on loading the instructions and explanations are almost non-existent — which is appalling for an educational program

At last the cricket score book can be made redundant

SuperScore is a cricket scoring program for the 48K Spectrum. A scoreboard is displayed. Input is by single letters or numbers using INKEY\$. Information on each innings is retained and can be viewed

A list of all instructions is included in the program. The program can score in any limited over, one innings, or two innings match

Hints on conversion

The three POKEs used have simple functions

POKE 23609,30 produces a beep when a key is pressed.

POKE 23658,0 switches off capslock

POKE 23658,8 switches on capslock

Points to remember

• Three-dimensional string and numeric arrays are used

• STR\$ changes a number into a string, VAL does the opposite

• If your computer doesn't use the ASCII codes you will have to amend line 200

Don't be stumped for the latest score. Simon Edwards' Superscore program for the 48K Spectrum will bowl them over at the local cricket club. Or you could try to catch out TV's computer

The program can be used to keep a record of the score when listening to the cricket on the radio. You could try and outperform the Honeywell computer used on TV, if you have a spare set. I also use SuperScore to keep a record of the game of Howzthat

Alternatively you could take your computer to your local cricket club to impress them with your electronic wizardry

The program can be SAVED in mid-game (use command S) which will also save all the variables. To make a copy of the program without variables type Y when the scoreboard is displayed

With each game you will be asked whether you wish to count each ball. If you reply Y then you must type 0 when no run is scored from a ball. If you reply N then you must remember to type 0 at the end of each over. When a cur

Take a scroll, and add a few flips

Scrolling is a widely used term in computing, but what exactly does it mean?

Well, put the cursor of your computer on the bottom line and press RETURN. The whole screen shifts up one line, leaving a blank one at the bottom.

This is not true scrolling — the image you now see is unmoved in physical location. Just the data has been moved and you are still looking at the same memory locations.

A true scroll is achieved by using the screen as a window, and then moving that window. The "cheat" scroll is implemented because it is cheap on memory and quick.

However, what if you have several set screens of information/images to display, as in a menu-driven program?

On most computers the answer is to set the data up in free RAM, then when required copy it into the dedicated screen RAM. One the Atari this is not necessary.

The display list description I gave in an earlier article was a basic outline. Here, we will go into further detail.

The display list is a set of instructions for ANTIC, the video CPU. Setting bit 6 or, in other words, adding 64 to an instruction turns it into an LMS — Load Memory Scan.

The ANTIC chip then uses the next two bytes as an address where it can find the screen memory. Try this:

```
10 PEEK 54276:PRINT
20 PEEK 54277:PRINT
30 PEEK 54278:PRINT
```

The display list set up by BASIC mode 0 holds its LMS operands in the 4th and 5th bytes. There is a problem with the LMS, in that it cannot cope with more than one 4K block of memory in one go. For higher resolution screens, or to cross 4K, more LMS instructions are needed. So what?

So, by POKEing the address of the screen RAM we want into the LMS operand, we can instantly change screen — a technique known as page flipping.

Delete line 30 and add this.

```
10 PEEK 54276:PRINT:GOTO 10
40 POKE 54274,SCREEN:PRINT:GOTO 40
50 POKE 54275,SCREEN:PRINT:GOTO 50
```

Make sure there is something on the top and bottom lines of the screen, then run this. The whole screen should "scroll" one line. The extra line pulled in at the bottom is inaccessible, and there is a non-visible line at the top of the screen.

This is because the operating system refuses to acknowledge the change. The only way round

We go into the Atari's ANTIC chip with Marc Freebury to find out how to flip pages and use fine scrolling

this is to avoid using PRINT or such statements as PLOT, and keep to PEEK and POKE.

Page flipping is an impressive animation tool. The ability to change the whole screen in an instant lends itself particularly to large scale object movement. Try this:

This shows the speed at which BASIC can operate — moving 40 characters almost faster than the eye can perceive. This also shows up a disadvantage of page-flipping.

This short program uses even screens, or about 6.5K. Thus the number of pages to be flipped between, and the resolution of those pages will have to be offset against the amount of memory available.

Page flipping also fails to allow a smooth progression — transition is instantaneous. For the menu, this is great, but for games it is less than ideal in certain circumstances.

Sometimes we will want to move over a playing area larger than the screen. Although the LMS operand can be manipulated in steps of one byte, the screen is assumed to be 40 characters by 24 lines, and data not of that width will not be displayed correctly. Therefore we are forced into copying the data to the screen.

In the end then, the manipulation is useful in some instances — try designing a complex "front page" for your game, then switching instantly to it. Most commercial games do this and it is very effective.

However, the problems with the format of the data will prevent large scale use of this technique from BASIC.

Now that we understand the principle of the LMS in display lists, we can go further into the

uses of the ANTIC instruction set.

The various bits 0-7 on an ANTIC instruction byte invoke various operations. For example, bit 6 indicates an LMS, and combinations of bits 0-3 give the graphics modes available; in BASIC modes 0-11 and to the operating system 0-15. What then of the other bits?

We are going to examine bits 4 and 5. When the computer stores the image of a character, so that it can display it on the screen, it stores it as a sequence of eight bytes, each byte containing one row of the character. The Atari has the inbuilt capability of moving any or all mode lines in increments of one of these bits (ie left and right one dot) and in increments of one of these bytes (ie up and down).

The capability extends to all modes, but is most easily explained and demonstrated using mode 0.

First, we inform the computer of the lines we wish to use this fine-scrolling on, and whether it will be left/right, up/down or both.

Bit 5 enables vertical scrolling, bit 4 enables horizontal scrolling. Generally we will want to scroll the whole screen but we also leave the top line (the one combined with the LMS) as a buffer!

```
10 PEEK 54274:PRINT:GOTO 10
40 POKE 54274,SCREEN:PRINT:GOTO 40
50 POKE 54275,SCREEN:PRINT:GOTO 50
```

Now, the amount of fine-scroll each line takes will depend upon the value we poke into location 54277 — the vertical scroll register. If it was not zero to start with, and you run the above, you might notice a "shift" in the screen. Don't worry. Type POKE 54277,0 and everything should be normal. The screen can be scrolled by up to 15 dots, that is two BASIC mode 0 lines. Try this:

```
10 PEEK 54274:PRINT:GOTO 10
40 POKE 54274,SCREEN:PRINT:GOTO 40
50 POKE 54275,SCREEN:PRINT:GOTO 50
```

LIST the program, then run it. Impressed? Now delete line 60 and add this:

```
60 PEEK 54277:PRINT:GOTO 60
40 POKE 54277,SCREEN:PRINT:GOTO 40
50 POKE 54278,SCREEN:PRINT:GOTO 50
```

Again, LIST and RUN.

To gain a continuous fine-scroll, we just finescroll the one line then reset the finescroll to zero and coarse scroll. Thus, delete lines 30 onwards and use this:

```
10 PEEK 54274:PRINT:GOTO 10
40 FOR I=0 TO 7:POKE 54277,I
50 FOR J=1 TO 50:NEXT J
60 NEXT I:GOTO 10
```

It doesn't quite work, does it? That sharp jerk is annoying, and even in machine-code it cannot be removed (I've tried).

So what we do is manipulate the LMS to move the displayed screen one line forward. Again this is a technique better suited to machine code but from BASIC we can show the principle.

Change and add the following lines:

```
10 PEEK 54274:PRINT:GOTO 10
40 POKE 54274,SCREEN:PRINT:GOTO 40
50 POKE 54275,SCREEN:PRINT:GOTO 50
```

The slight flicker in this can be ironed out in machine code. Horizontal finescrolling has the added problem that the lines on the screen are contiguous memory locations, so if you scroll one in the middle alone, what comes on at the edge? The answer is that the characters from the line above/below comes on to fill the gap, and as a result the whole screen gets thrown out of line.

This can be demonstrated by changing the 34 in line 20 to a 50. We are now setting both horizontal and vertical finescrolling. Register Horizontal Scroll at location 54276 controls the amount.

To correct the displacement problem, screen data must be arranged and retrieved in lines of greater width than one normal line. So, to do this, we POKE location 559, register DMACTL, with 35. This means that ANTIC will now pull 48 locations per line instead of 40.

It also means that you will have to organise your information accordingly. Now the rough edges are not displayed on screen and scrolling in both directions appears smooth.

For the best example of finescrolling, try getting a look at Eastern Front 1941 from the Atari Program Exchange.

What's new in programmed learning?

Our review panel gives marks out of a hundred to a selection of software for learning at home and at school

Pacman 1 and 2 BBC 32K £7.95

Chalksoft, Lowmoor Cottage, Tonedale, Wellington, Somerset

"Munch", "scoff" and "pling" could well describe the action of this punctuation exercise game, for children of eight years or above. The good sound and

graphics of these programs, using a continuously animated spherical "pacman" motif, promote both good motivation and concentration span, in the children using them.

In play, Punky the Good draws correct text on the screen, the commas, full stops and capital letters of which are then rapidly consumed by the nasty green Noshier the Bad. The child then must put the stolen punc-

suation back into the text, using the cursor control keys.

The idea is a good one, but the examples of text consist of dreadful comic slang, that even has incorrect punctuation — as all quotes and necessary apostrophes are missing (to make things simpler?). Fortunately, teachers can easily insert their

abc lift off Spectrum £7.95

Longman/Micromega, Longman House, Burnt Mill, Harlow, Essex CM20 2JE

A nice "early learner" program. There are two parts to this program and you can choose which you require.

First is the alphabet, the letter A and apple are displayed top left, and in the bottom right corner a drawing of an apple is shown.

By pressing the next letter (B) a new picture (a bus) is drawn and the name written up. This continues throughout the alphabet, a useful trainer program for very young three-plus children.

The second section is a little game. A rocket is drawn then

three crates below it which, in turn, pass beneath it, the contents are revealed and a word is displayed.

Pressing if they match adds the item to the cargo, if not an item is removed. When full the rocket takes off. Good practice in matching words/pictures and alphabetical sequencing.

Good graphics and colour, although sound was not used to the full. Easy to use, interesting and enjoyable. A good, but not outstanding program, which is well error trapped, bug free and reasonably user friendly. My biggest criticism is the price. **R.F.**

Tele-Tutor 1 Dragon £25

Microdeal, 14 Truro Road, St Austell, Cornwall PL25 5JE

This package contains two cassettes with four items, an oral spelling test, a multiple choice vocabulary quiz, a maths drill, and Estimate, to help in mental arithmetic. An A4 hard-back ring binder contains all the information needed to load and use the programs.

The package is designed for children aged five to adult. An ambitious claim, yet one that is achieved by allowing you to input data in two of the programs — Spelling and Word Drill.

The two maths programs offer different skill levels that adjust as the work progresses, and up to five or six pupils may work at the same time.

All the results are shown at the

end and in one case a high res smiling face is formed at the correct answers are given. A nice idea, particularly for schools, is the option to print results.

I found the spelling and vocabulary work too slow for general classroom use. Having put my own data in it took between ten and fifteen minutes per child. Good at home, however, allowing reinforcement of school work.

The maths work, by contract, was very good in school.

There's a lot of potential for this sort of package and it bodes well for the Dragon's future as a school-based computer. **M.P.**

Facemaker BBC 32K £9.95

ASK, London House, 68 Upper Richmond Road, London SW15

This has to be the most surprising educational program I have seen. The idea is to build up faces on the screen by answering questions about the features and seeing the product of your answers appear.

The questions cover such things as eyes, hair, mouth, ears, etc. and some alternatives are given e.g. small or large for eyes.

My first criticism is that there are not enough alternatives in some cases, like ear size, so you have to make inappropriate choices.

There are also no alternatives for age or colour/ethnic type, so it would not really be of great value in multi-ethnic schools. In fact the question of value is a

rather difficult one to assess. I cannot really think of any area of education where this fulfils a need and the Educational Notes in the accompanying booklet are just as vague as I am!

There is no way I would be prepared to spend his amount of money for the little and gimmicks use this program is likely to get in school or home. One final and major point is the total lack of a screen dumping facility — so your masterpiece is lost forever as soon as another is created. **D.C.**

instructions	70%
ease of use	70%

value for money	21%

Hide & Seek BBC 32K £9.95

ASK, London House, 68 Upper Richmond Road, London SW15

Based on the old familiar games of Hide & Seek, Pelmanism and Kim's Game, this program's overall aim is memory training, and it succeeds very well indeed. There are three games usually with more than one difficulty

level, so the program will span a large age range.

Besides being useful as a single player game I would suggest that this could be used with a small group of children to encourage communication and discussion skills. The input required varies from single key presses to spelling complete words but the error trapping is such that it is very difficult to crash the program accidentally.

The most outstanding feature of the program is the number and variety of the graphic shapes presented. They are just the right size and are very easily recognisable. The instructions are to the high standard that this company usually presents.

I would however suggest you use command *F.X210.1 before loading, as this will stop the constant sound effects from driving you mad. **D.C.**

Taking the worry out of buying

Let's start this week's column with a prediction of the future of home computing by certain respected members of the profession.

First of all Clive Smith, research director of the well known Yankee Group. In Mr Smith's opinion, from five to eight million computers will be sold this year (here). He also projects that eventually there will be many computers in each household just like there are radios now.

Some of his other predictions: home computers will be much more commonly used as communications terminals when 1200 baud modems that cost less than \$100 become available in quantity; that word of mouth will become the primary criteria for program buying that home computers will be placed in one of three categories (novelty, 16k, or professional 64k), that there will be at least 30 000 computer dealers in the U.S. by the end of this year, and that dealers will begin to specialize their offerings to one or two lines.

Don Ross of Times Corp., which markets their version of the Spectrum and ZX81, looks for personal productivity software products to really take off in sales, and for pricing to stabilize with the competitive emphasis shifting to value and features.

Many other leaders agreed that obsolescence of customer's equipment should be minimized, more emphasis should be placed on after-purchase support, and that sales support should feature in depth product availability.

It would certainly be nice for those predictions to come true. If nothing else, a little stability in the marketplace would be nice. There are many consumers indeed who are afraid to buy the most cost effective product, regardless of whether it is hardware or software, for fear that its maker may not be around in a year or two. They do not want to end up with a very expensive paperweight or dust collector.

I rarely mention the availability of software or hardware for the Tandy Color Computer. It isn't that I am biased against the machine. It is just that I hardly ever see anything advertised or written about for it in particular.

Here is the rare exception. Super "Color" Writer II, version 3.0, has just been made available. This little software package is a word processor offering eight high resolution displays having true descenders. It also allows 60k of memory using the ROMpak version in a 64k computer or 51k using the disc or tape versions.

Editing functions include locate and change, line insert, block moves, various delete functions, and full cursor control. The program allows you to automatically justify print lines, use super- and subscripts, perform underlining, include headers and footnotes, and pause between single sheet feeds. It also allows you to view a reproduction of the finished copy on the screen before printing it.

Using special horizontal scrolling techniques, you can create and edit pages having up to 240 columns per line. There are programmable functions that will allow you to automatically include standard phrases, edit and create columns, link text files, and other features.

Printing commands can be placed anywhere in the text to control the printed output on the fly. All versions include the necessary commands to save and load files to tape, while the disc version includes the most up to date disc operating system commands that the Color Computer will support.

The tape and disc versions use at least 32k and cost about \$70 and \$100 respectively. The ROMpak version requires a 64k machine and costs about \$90. For further details contact the manufacturer, Softlaw Corporation, 9072 Lyndale Avenue South, Minneapolis Minnesota 55420. This seems like a very good product for the price.

That's it for this week
Bud Izen

Fairfield, California

**Frogger
TRS-80
Models I and
III £14**

Microdeal, 41 Truro Road, St Austell, Cornwall PL25 5JE

This game is also available on disc for an extra £2. Both versions are joystick compatible, and can provide sound through an appropriate amplifier.

There's a standard road-and-river scenarios, with the added hazard of crocodiles and snakes in the river

The producers have done their best to make the most of

the TRS-80's limited graphics and have provided a haunting soundtrack. It's a real pity that the machine doesn't allow colour. The screen is very crowded, and it does take a while to recognise some of the objects.

Having said that, I enjoyed the game, and found it much more playable once I had got accustomed to teasing crocodiles apart from logs

D.B

**Games to
catch you
on the hop**

If you're hopping mad, these games are for you — they're all based on the Frogger theme.

**Croaker
BBC B £7.95**

Program Power, 8 8a Regent Street, Chapel Allerton, Leeds LS7 4PE

This is Program Power's version of the amphibian arcade

classic, which places you in control of a somewhat misshapen frog

Points are awarded for each successful move and for each Frog delivered safely home. Bonus points are awarded for swift completion of each phase, when a family of six frogs are at home. Each phase becomes

progressively more difficult. The game is well presented with concise instructions on the cassette insert. The instructions are also included within the program.

Use of graphics and sound is excellent. Most pleasing is the ability to be able to switch off the background Beethoven I

found one small bug in that the Escape key does not appear to be fully error trapped. Try it and see!

**Super
Frogger
TI-99/4A
(Extended
Basic)
£13**

By Norton Software, from Stainless Software, 10 Alstone Road, Stockport

The game begins with the question: Do you want to play the Advanced game? If you answer Y you're then asked for the password, which of course you don't know unless you got it by playing sufficiently well at the non-advanced game

This latter is slow to start, although the graphics are quite good and colourful. You guide

your frog across a busy road followed by splash free guidance across a river via logs/barges/etc. The occasional crocodile may be thrown in for good measure.

Time is a factor displayed via a shortening red line while you attempt to steer your frog across to the opposite river bank

You have four lives and once you get the hang of it, it can be quite good fun

instructions	70%
playability	70%
graphics	85%
value for money	20%

P.B

**Leapfrog
TI-99/4A
(Extended
Basic)
£3.99**

Saturn Software, 79 River Park, Marlborough, Wilt

Guide a large green frog, firstly across a busy motorway, without being reduced to frog puree by a thundering juggernaut and then hopping across a river aided by a number of floating barrels and turtles, until eventually you reach the sanctuary of your froggy hole

The tape contains two versions, one for keyboard and one for joysticks

The colourful graphics and sound effects were good, making extensive use of Extended Basic's sprite facilities

The game itself was unfortunately a little limited in scope, missing several features found on other versions. Still, with a price tag of £3.99, it can be considered value for money

instructions	50%
playability	50%
graphics	80%
value for money	70%

V.A.

**Frogger 64
Commodore
64 £7**

Interceptor Micros, Lindon House, The Green, Tadley, Hants,

Apart from frog, road, and river complete with logs and

turtles, other objects on the screen are alligators, worms, crocodiles, lady frogs and flies. The graphics for all of these are of an extremely high standard.

It would have been better, however, if the frog moved smoothly rather than flashing from one place to another

The game is potentially a winner. The trouble is that it con-

tains some bugs. Strange things sometimes occur when you are three-quarters of the way across the screen: you may lose a life or reappear in an odd place. Before buying the game I would advise you to check that these have been ironed out

The keyboard or joystick can be used to play the game — the keys are sensibly placed

K.L.

The easy way to hi-res colour with your Oric

In my previous article I demonstrated how multicoloured displays may be obtained on the Oric-1 in TEXT mode

Many of the principles described in that article can be applied to Oric's HIRFS mode, but there are a number of differences

So, although this article aims to show how high resolution colour displays can be obtained on the Oric, I'll start by re-capping on the principles developed last time

The Oric display file in TEXT mode contains a mixture of characters and attributes. This 'file' is located between 48000 and 49119 on the 48k Oric, and 15232 and 16351 in the 16K version

The lower address corresponds to the top left screen position, the higher is the bottom right position. Each byte corresponds to one character square of the screen display of 28 rows of 40 characters. The first two characters of each row are the attributes for PAPER and INK. Attributes have byte values between 0 and 255

The remainder of the row can either be characters (byte values between 32 and 127, and 160 and 255), or more attributes

The first two attributes in the row define the foreground and background colours for the whole row unless, in progressing right across the row, another attribute is encountered. At this point, the new colour takes over

Attributes appear as spaces on the screen

The display file in HIRFS mode is far larger than in TEXT, extending from 40960 to 49119 (48k), or 8192 to 16351 (16k)

The major part of the display file (40960 to 48959) is devoted to the high resolution chart, while 120 bytes (49000 to 49119) are used for the three rows of TEXT style display at the bottom of the screen

To demonstrate how the display file is arranged, type in the following short routine, and RUN

```
10 HIRFS
20 FOR I = 40960 TO 48959
30 POKE I, 60: PRINT I
40 NEXT I
```

As the value 60 is POKEd sequentially into the display file, the address to which the value is placed is printed on the TEXT portion of the screen

In another article on handling the Oric's screen display, David Nowotnik shows how to get high-resolution colour, with routines you can try

The demonstration should show two things. One byte in HIRFS mode stores the dot pattern for one row of six dots. And, the display file starts at the top left of the screen, and works its way across the screen; after 40 bytes (or $40 \times 6 = 240$ dots), the next byte (41000) starts on the left of the second row — and so on down the screen

Like TEXT mode, the global INK and PAPER colours are stored as attributes on the display file, unless you want a white on black display

Try a few direct PAPER and INK commands after RUNNING the above routine. The display

colours will change, and the two left-most columns are replaced by attributes (as they would be in TEXT mode)

Table 1 demonstrates how to calculate the value to be POKEd to give any desired dot pattern. Note that all dot patterns have values between 32 and 127

Colour attributes have values between 0 and 7, and 16 and 23 (as shown in table 2). Try the following routine.

```
10 HIRFS
20 FOR I = 40960 TO 48920
STEP 40
30 POKE I, RND(1)*8 + 16
40 NEXT I
```

You should get thin rows of colour on the screen. Type PAPER 4, and you'll get just one block of colour. Add the line 35 POKE I + 20, RND(1)*8 + 16 and RUN again. You get thin colour lines again, but the colours change half way along the row. Line 30 POKES the background colour attributes down the left hand side of the screen

This defines the colour for the whole row (without line 35). With line 35, more attributes are placed halfway along each row; these redefine the colour of the right of the attribute. The PAPER command will alter all the attributes in the first column, but not those created by line 35

The FILL Command can be used instead of POKE. FILL effectively POKES a number into a specified block of bytes. The top left position of the block used by FILL is the cursor position. Try 10 HIRFS

```
20 FILL 20,10,60
```

This will FILL a block 10 columns across, and 20 rows down with the dot pattern appropriate to the value 60. The block is positioned at the top left of the screen, as the cursor starts at this position. Now, add a line

```
15 CURSOR 20,20,0
```

and RUN again. Now the FILLed block has moved away from the top left; its starting point is 20 rows down, and the integer of $(20/6 + 1)$ columns across

Note that after FILL the cursor position is in the byte immediately below the bottom left hand corner of the block filled

FILL can be used with attributes in the same way, but you should only want to FILL one byte, or one column of bytes, so you would use

```
FILL x,1,ATT
```

where x is the number of columns to be filled

When you have an attribute on the screen, it appears as a blank space. If you use the commands DRAW or CIRCLE, and the line goes through one or more attributes, then nothing will appear on the screen at the attribute position

```
10 example
10 HIRFS
20 CURSOR 0,1,0
30 POKE 41020,20
40 DRAW 200,0,1
```

Note that, should the DRAW command go through several attributes, your program may stop with a system error message

One final tip about HIRFS mode: The command CLS will only work on the TEXT portion on the screen. To clear the screen, use HIRFS again

Table 1 calculation of the value for dot patterns in HIRFS mode

32	16	8	4	2	1	+ 64
----	----	---	---	---	---	------

Add up the numbers associated with the boxes (dots) that you want 'switched on', then add 64 (number range 64-127). Note, you can use numbers between 32 and 63, but the left-most dot will always be 'on'

Table 2 attribute values for Oric colours

Colour	fore-ground	back-ground
black	0	16
red	1	17
green	2	18
yellow	3	19
blue	4	20
magenta	5	21
cyan	6	22
white	7	23

Find words you never knew existed

Variables
 L\$(I) characters in word(s)
 R(I) order of characters in anagram
 S\$(I) specified characters in anagram
 P(I) position of specified characters
 AN\$(I) SAVED anagram
 C(I) array to check the characters in anagram match characters in word
 N number of letters in word
 LP characters in specified anagram

How it works
 15-94 display title
 100-200 break up word into characters
 210-350 create anagram by randomising all unspecified characters
 360-400 print anagram and allow options to be taken
 1000-1220 subroutine to allow part of anagram to be specified
 1500-1550 subroutine to print options
 2000-2080 subroutine to SAVE anagram and to list selected anagrams to date
 2500-2540 LIST selected anagrams, end

Hints on conversion
 Few problems would be expected in converting this program to run on other micros in BASIC. Considerable use has been made of the cursor controls in the PRINT statements and in converting the program some effort would be required to achieve a satisfactory screen format. There might also be differences in some of the string handling commands, but otherwise conversion should be straightforward.

Impress your friends, offend your enemies. Just let my program loose on their names and it will generate several good — or nasty — anagrams.

It could also be used for semi-serious applications such as Scrabble, crosswords and competitions.

Type it into an unexpanded VIC-20 and the title "Anagram" appears and is randomly rearranged until C is pressed.

You are then asked to enter your word/s, which can be up to 20 characters long.

The program recognises spaces as characters and it's a good idea to include some spaces as this tends to generate the best anagrams.

Now sit back, watch the screen and let inspiration hit you. The computer does the work and it's far easier than fiddling with Scrabble tiles.

If you see a letter grouping which appeals to you press S. You can then enter this grouping anywhere in the anagram and the computer will build round it.

When you have an anagram you like you can SAVE it, plus 14 more. When you have finished, terminate the program and the computer will list your chosen anagrams.

I have written the program in "no-frills" BASIC, avoiding PEKs and POKs, to allow easy conversion. It will also run on a Commodore PET.

See what your computer can do with words. Bryn Phillips wrote Anagram for the unexpanded VIC-20, but it will easily convert to other micros

```

*Inside...
The New ZX Microdrive!
Latest software...
Latest prices...*

The ZX Microdrive - and more!

For some time now, the new ZX Microdrive has been the subject of much discussion. Which is only to be expected, when the object of everyone's anticipation is *completely* new to the world of computing.

Microdrive provides high-speed access to truly massive storage. With just one Microdrive, you'll have at least 85K bytes of storage, and the ability to LOAD and SAVE in mere seconds. Yet the ZX Microdrive is about the size of a Spectrum mains adaptor, and costs less than £50!

First stocks are now in. Microdrives will be released on an order of priority basis. Spectrum owners who purchased by mail order, direct from us, will be sent full details including how to order, in a series of mailings that begins with the earliest names on our list.

And if you didn't buy by mail order?

Don't worry - for a colour brochure with full information on Microdrives, including how to order, just send us your name and address (use the coupon at the back of this issue of Sinclair Special). But remember, the sooner you send us your name, the sooner you'll get on the list.

Of course, there's much more to Sinclair than Microdrives, as you'll see on these pages. The latest releases of Spectrum and ZX81 software have been amongst the most successful ever. Prices of most established Sinclair products are at their lowest ever. To buy what you want, just use the Order Form.

Until the next issue of Sinclair Special, and more good news ...

Nigel Searle, Managing Director,
Sinclair Research Ltd.

PS: Come and see us - and all that's new at Sinclair - at the PCW Show, Barbican Centre, from Sept 28th to Oct. 2nd. We'll be pleased to see you!

ZX Microdrive System preview!

ZX MICRODRIVE

At least 85K bytes storage, loads a typical 48K program in as little as 9 seconds. £49.95

ZX MICRODRIVE CARTRIDGE

Compact, erasable, revolutionary. Complete with its own storage sleeve. Contains up to 50 files, with a typical access time of 3.5 seconds. £4.95.

ZX INTERFACE 1

Necessary for sending and receiving data from ZX Microdrive. Includes RS232 interface, enables creation of local area network of 2 to 64 Spectrums. Attaches to the underside of your Spectrum. Purchased with ZX Microdrive, just £29.95. As separate item, £49.95.

Six new ways to make more of your Spectrum

Take a look at these brand-new titles. Each is an outstanding new program using the full potential of the Spectrum, for games with stunningly animated graphics, for strategies of fiendish cunning, for masterly applications of computing capability.

Cyrus-IS-Chess Based on the Cyrus Program, which won the 2nd European Microcomputer Chess Championship and trounced the previously unbeaten Cray Blitz machine. With 8 playing levels, cursor piece-movement, replay and 'take-back' facilities, plus two-player option. The 48K version has many additional features including an extensive library of chess openings. For 16K or 48K RAM Spectrum.

Horace and the Spiders Make your way with Horace to the House of Spiders, armed only with a limited supply of anti-spider-bite serum. In the house, destroy the webs before the spiders can repair them. Then destroy the spiders, before they destroy Horace! Undoubtedly the creepiest Horace program ever produced! For 16K or 48K RAM Spectrum.

Computer Scrabble The famous board game, on-screen – with the whole board on view! A huge vocabulary of over 11,000 words. Full-size letter tiles, four skill levels – the highest of which is virtually unbeatable. For 1 to 4 players. For 48K RAM Spectrum.
(SCRABBLE trademark and copyright licensed by Scrabble Schutzrechte und Handels GmbH – a J.W. Spear and Sons PLC subsidiary.)

Backgammon A fast, exciting program, with traditional board display, rolling dice and doubling cube. Four skill levels. For experts – or beginners. (Rules are included – it's the quickest way to learn the game.) For 16K or 48K RAM Spectrum.

FORTH Learn a new programming language, as simple as BASIC, but with the speed of machine code. Complete with Editor and User manual. For 48K RAM Spectrum.

Small Business Accounts Speeds and simplifies accounting work, produces Balance Sheets, Profit and Loss information and VAT returns. Complete with User manual. For 48K RAM Spectrum.

Overleaf – your Sinclair order form.

Latest ZX81 software

Prices round-up

These three new cassettes offer two totally different challenges to you and your ZX81. The games – like so many ZX81 games today – really do use the ZX81's capability. The FORTH program is a fascinating extension of your own computer understanding

Sabotage. Defender or attacker? The choice is yours in this exciting game.

Be the guard and defend the ammunition in the compound – or be the Saboteur and attack it!

Written by Macronics for a ZX81 with 16K RAM. Cassette price: £4.95.

City Patrol. You are the Commander of a

laser-firing ship. Your task is to intercept and destroy alien suicide ships descending on your city.

Written by Macronics for a ZX81 with 16K RAM. Cassette price: £4.95.

FORTH. Discover a new programming language which combines the simplicity of BASIC with the speed of machine code. FORTH's compiled code occupies less than a quarter of the equivalent BASIC program and runs ten times as fast. Free User-Manual and Editor Manual with each cassette.

Written by Artic for a ZX81 with 16K RAM. Cassette price: £14.95.

- ZX Spectrum 48K now just **£129.95.**
- ZX Spectrum 16K now just **£99.95.**
- ZX81 now just **£39.95.**
- 16K RAM Pack for ZX81 **£29.95.**
- ZX Printer now just **£39.95.**
- 1.2A ZX Mains Adaptor **£7.95.**
- Printer Paper (5 rolls) **£11.95.**

How to order

Simply fill in the relevant section(s) on the order-form below. Note that there is no postage or packing payable on Section B. Please allow 28 days for delivery. Orders may be sent FREEPOST (no stamp required). Credit-card holders may order by phone, calling 01-200 0200, 24 hours a day. 14-day money-back option.

Raider of the Cursed Mine
ADK Spectrum
£5.50

Arcade, Technology House, 32 Chislehurst Road, Orpington, Kent BR6 0DG

The evil spirits that inhabit the cursed mine have been aroused by your desire to steal their diamonds. Beware of falling boulders, bats who steal points, spider's webs, and a ghost that has a nasty habit of materialising near to you.

There are three lifts, which take you up or down levels and provide you with complete safety. Extra lives can be gained by drinking life potions.

A bonus is given which varies with the length of time you took to steal all the diamonds, then you start a new level.

This interesting concept has all the makings of an excellent game, but the action is far too slow. Once you've got the hang of it, the game drags on interminably, because the difficulty remains the same. To make matters worse, after the score has reached about 36,000 it reverts to 0.

Understandably, Arcade are now bringing out an improved version with graded difficulty.

If you're hopeless at playing arcade-style games, then "Raider of the Cursed Mine" could be ideal. Otherwise, you'll master it so quickly in its present form that it will become boring. S.E.

Escape-MCP
VIC-20 £5.99

Rabbit, 380 Station Road, Harrow HA1 2DL

For some reason only one of the four copies of this game would load unless in a Rabbit program.

This is a maze game. Stop groaning, it's a good maze game, and original at that.

There is little doubt that the MCP referred to in the title is not Maze Chauvinist Pig but Master Computer Program as in Tron.

The point of the game is to rush along a convoluted corridor pursued by a leggy M-shaped ob-

From silver screen to TV screen

These five programs take their themes from the cinema. Before buying, read our critics' reports

ject (which cares little for walls). It is difficult to keep out of the way of the opposition, but possible with skill and dexterity. Control is from joystick or keyboard, the latter proving more precise.

Different levels are achieved with increasing difficulty, as walls are in part invisible in the higher levels.

This is a good game with only a little music. I recommend it. I.D.

Star Trek Commanders
£6 £7.00

Interceptor Micros, Lidon House, The Green, Tadley, Hants

Star Trek is one of those old favourites which are always cropping up in varying formats. The usual plot is that you pilot a space ship and spend your time exploring the universe, killing Klingons and trying to gain promotion. The complexity of the game varies depending on the programmer.

As they go, this is a fair but not exceptional version. You are offered three different scenarios which offers a nice variety. The perceived complexity of the game was high with two "computer" options, detailed break-down of

ships status and very detailed star maps.

The use of graphics was good and the star map quite neat with a cross hair cursor to help you study different star systems.

As play proceeded I got the impression that the game wasn't as complex or enthralling as first impressions suggested. The combat routine wasn't particularly gripping. With the graphics capabilities of the 64, I had expected moving aliens, zapping lasers and a bit of fast real time action.

But overall, not a bad version of a good old standard, and at the price, a good buy. A.W.

playability	90%
graphics	70%
value for money	70%

Hummer House of Horror
Spectrum 48K
£7

Lasersound, Stratford Workshops, Burford Road, London E15

This is a typical haunted-house adventure game in which you have to traverse 60 rooms on four floors to reach a maiden with an hour to live.

The display is a sequence of 3D rooms, all the same except for the number of doors and the occasional staircase.

Labels show the room's inhabitant and items to pick up, and the name of the room and the progress of the chance en-

counters appear as text in a panel at the bottom.

Text messages tell you the results of your input and, then, perhaps, the room changes. A nice touch is a one hour clock in a corner of the display.

I found both copies very difficult to load and the system of matching strings to give instructions is slow and error prone.

The repeated display becomes very dull and you are invited to keep a note of your strength, which drops with moves and goes up or down with encounters. Why not display it? This is a pretty ordinary game. H.C.

Battlestar Attack
TI-99/4A
(Extended basic) plus Joystick
£10.00

Lantern Software, 4 Hatfielden Road, Tenterden TN30 6QD

Fans of Star Wars will need no introduction to the theme of Battlestar Attack.

Your mission is to destroy the battlestar which threatens your home planet. Its destruction is accomplished by firing at the exhaust port five times.

The battlestar, however, is surrounded by mines which will damage your shields unless they are disposed of first.

If you successfully wipe out one battlestar the game begins

again as another of a whole fleet appears.

The action is fast and becomes more furious as skill levels are increased from 1 to 4. Even at level one, a very addictive game. J.W.

MAIL ORDER PROTECTION SCHEME

If you order goods from Mail Order Advertisers in this magazine and pay by post in advance of delivery, this publication will consider you for compensation if the advertiser should become insolvent or bankrupt, provided:

1. You have not received the goods or had your money returned; and
2. You write to the publisher of this publication explaining the position not earlier than 28 days from the day you sent your order and not later than 2 months from that day.

Please do not wait until the last moment to inform us. When you write, we will tell you how to make your claim and what evidence of payment is required.

We guarantee to meet claims from readers made in accordance with the above procedure as soon as possible after the advertiser has been declared bankrupt or insolvent to a limit of £1,800 per annum for any one advertiser, so affected, and up to £5,400 p.a. in respect of all insolvent advertisers. Claims may be paid for higher amounts, or when the above procedures have not been complied with, at the discretion of this publication, but we do not guarantee to do so in view of the need to set some limit to this commitment and to learn quickly of reader's difficulties.

This guarantee covers only advance payment sent in direct response to an advertisement in this magazine (not, for example, payments made in response to catalogues, etc. received as a result of answering such advertisements).

CLASSIFIED ADVERTISEMENTS ARE EXCLUDED.

COMPUTER "X"

48K Computer "X" mainframe (comparable with Apple II & Apple II Euro). £295

64K Computer "X" mainframe (comparable with latest Apple IIe 64K). £495

Computer "X" has an identical computing performance to the Apple. Both the 64K & 48K Computer "X" are **ABSOLUTELY GUARANTEED** to support all software which will run on the Apple II, Euro and IIe.

The following system packages are available:

48K Computer "X" + 12" green monitor + dual 5 1/4" disc drives with controller & interface card. £785

Same system, but with 64K Computer "X" mainframe. £955

Complete system, as above, but with 64K Computer "X" & CP80 printer. £1260

(CP80 printer spec: dot matrix; tractor & friction; bidirectional print head; hi-res bit image graphics; 80 column normal, 142 column compressed & double width 40 column print selectable, max paper width 10")

CP80 available individually at £325

The following expansion and intelligent interface cards are available, compatible with Apple II & Apple IIe as well as Computer "X".

Disc interface card	£31	80 column card	£44
Language card	£33	16K ram card	£31
Forth card	£38	Z80 card	£34
Printer interface card	£40	RS-232	£33
Integer Basic card	£34	PAL card	£35

1/4 Megabyte (256K) solid state disc and operating system. This device plugs in just like a card, being specially shaped to fit inside the Apple or Computer "X" case and is used just like a normal disc drive, however, access or storage of information is approx. 4 times faster than average and the cost is less than a normal disc drive. £235

(All prices add VAT)

All items 12 month guarantee

QUEST MICROSOFTWARE

FOR ZX SPECTRUM

The battle could be yours.....but it won't be easy!

PARTICIPATION – that is the name of OUR game. All our software contains a unique score verification mechanism allowing us to add a new dimension to computer games. Every July and January we will be publishing a ranking list of the top 1000 scorers in each game with the overall top 100 'grand masters' each receiving certificates of merit bearing their position.

September is the last month to qualify for the Black Hole championship. However, from October the sender of the highest valid score each month will win software of their own choice to the value of £50.

Totally original game plan. Addictive, challenging and offering a complete visual experience with its animated graphics and violent explosive effects. Compatible with ALL leading joysticks.

If you are looking for something that will keep you up all night, cause you to pull your hair out, send you mad with its trickery, then you really shouldn't miss this game. The mystery of "THE PYRAMID" won't take you a few days to solve, it will probably take you a few months.

The Black Hole is a technicoloured confection of special effects...very demanding; magnificent graphics. (Soft)
The explosion effects are some of the best we have seen.
... (Sinc User)

QUEST SPECTRUM SOFTWARE is available from W.H.Smiths, John Menzies and Computers For All

QUEST... ...SIMPLY THE BEST

ASK FOR QUEST SPECTRUM SOFTWARE at your local SOFTWARE RETAILER

THE BLACK HOLE and VIOLENT UNIVERSE for the 16K or 48K Spectrum are obtainable at £5.50 each from QUEST MICROSOFTWARE, 119 THE PROMENADE, CHELTENHAM, GLOS GL50 1NW despatched by return first class post together with a membership number entitling you to discount on our forthcoming blockbusting software.

Trade Enquiries welcome – telephone 0242-583661
